

INTRODUCING THE **AUXILIARY PUMP CART** FOR ALL FAWSSit™ SHOWERS

Anxiety Free Bathing

With the FAWSSit™ AUXILIARY PUMP CART the pump can be moved up to 30 feet from the shower stall, creating a quiet shower zone. Bathers with Alzheimer's, dementia or noise sensitivities greatly benefit from this option.

The FAWSSit™ Shower allows for safe and anxiety-free bathing for people with Alzheimer's or dementia

So many of us have been touched by Alzheimer's or dementia through friends, family, and loved ones. Most have firsthand experiences with the impact of these conditions on the activities of daily living.

Often, the first signs that people with Alzheimer's and dementia show is forgetting to take baths on a regular basis or putting on clean clothing. As the disease progresses, some people become fearful of their fully enclosed shower stall and do not understand why water is splashing down on them. In addition, a compromised sense of equilibrium may cause dangerous falls or slips in a bathtub or shower stall.

The FAWSSit™ shower helps ensure the safety of showering. The person stays seated in the shower wheelchair or shower chair while showering, avoiding slips or falls. The water is continuously drained by a pump. No water accumulates that the person needs to sit in and wait to drain.

Some people may develop a noise sensitivity. For them, a running pump can be overstimulating or discomforting. Our solution is to distance the water pump from the shower stall, allowing for better comfort. Our custom auxiliary pump cart can be rolled up to 30 feet away from the FAWSSit™ shower stall, creating a quiet shower zone.

The FAWSSit™ Shower helps people maintain their dignity by having a privacy curtain and handheld shower head. They can do as much as they can on their own or ask for assistance when needed.
